Approved Supplier Listing - NDT Process

1) Each supplier is approved for the specification in the column heading. If there is a date entry in the cell of the column, the supplier named on that line is approved by Raytheon for the performance of that specification. If there are part numbers listed, the supplier is approved for the part numbers listed for that particular specification only. If there is no date entry in the cell, the supplier is not approved for the specification identified in the header of the column.
2) The certification for each specification expires on the last day of the month listed in each cell. New POs shall not be placed with expired suppliers.
3) Expiration dates within 3 months of the date the spreadsheet is generated are highlighted in yellow, and all others are shown in green.
4) Each supplier must have a valid QMS certificate on file with Raytheon

Date Generated 8/13/2026
